

**SW Engineering CSC648/848**  
**ADSPets Adoption and Blog Site**

**Section 04 Team 01**

Khadija Khan - Team lead

Qin Chen - Backend lead

Katie Chang - Scrum master

Elyod Abraham - Frontend lead

Avitaj Singh Bhangoo - Github master

Brahamjyot Kaur - Frontend lead

**November 4, 2023**

## **I. UI and functionality feedback**

- Instructor's comments on UI/functionality for your demo
  - After logging in, send users to the adoption page
  - Add buttons on the navigation bar
  - Create the homepages for the shelter vs. customer users that has application status on there
- Plan for the comments
  - We plan to implement all of these things by Milestone 5

## **II. P1 features committed for delivery**

- Sign up for users and shelter
- Login page for users and shelter
- Users can submit applications
- Registered users can make posts for our blog
- Shelters can approve/deny applications
- Front page with preview images of animals

## **III. Risks**

- Schedule
  - Multiple members of our team work, which makes it hard for us to finish some tasks. Because of our work schedules, it is also hard to meet outside of class to do things.
  - Some members live outside of the city and there is an issue figuring out meeting times as well. We have one but it's a bit difficult when it comes to other times.
  - To resolve these, we will plan to give easier tasks to people who are busy and give people who have more time tasks that will take longer. If the busier people have time, then they can help with the other tasks.
- Technical Skills
  - Everyone for their respective roles has the skills to get their tasks done. As a team, we share videos/resources with each other that help us do tasks in case one of us isn't sure how to do something.
- Team work
  - Using discord, we communicate with each other regularly through the week. We manage to do work together and have been communicating if we are having issues. If we have issues, we work together to fix them.
